ATTEMPTING A FRONTAL ASSAULT ON A FIRE

Attempting a frontal assault on a fire is recognized as Watchout Situation #10 and is a potentially dangerous tactic.

● If your tactics include a frontal assault, the following checklist must be adequately addressed before engaging the fire:

- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible. (Anchor points, safety zones, escape routes, etc.)
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?

● continued...

- Do you have adequate resources to complete the assault? Discuss things you need to consider; for example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics, and hazards? Consider what could happen if someone has a different approach than you; i.e., the IC has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.

● In order to reduce the risks, reassess your tactics, post lookouts, identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
